

RGH32 Two point Harness

Accredited To:EN361

Web Material:45mm water repellent polyester.

Fittings:High Tensile Steel Alloy

Weight:1.25kgs

Features:Budget Two point Harness

The RGH32 is our NEW budget harness, The harness is still manufactured to our very high standards but does not have fall indicators and uses a more economic connection system. The front attachment is by means of webbing loops as illustrated in the above image.

This harness can be used similar to the RGH1 (see data sheet), but has the added feature of the front Attachment point to extend the working capability of the harness.

Utilizing the front attachment point, the harness can be fitted with a rope and grab system (RGA12) for vertical fall protection when an operative is making repeated ascents or similarly, when restraint/work-positioning is needed in either the vertical or horizontal plane.

A variety of other devices can be used with the front dee ring, but please check for suitability.

The harness is fully adjustable and is fitted with rip stitch indicators. The ring connection between the chest & the shoulder straps, ensure no stress loading when force is applied the front dee ring.

(For details of daily inspection procedures, see the info sheet
