Web Material:25mm Polyester 40Kn

Fittings: Any Compatible EN362 Karabiners

Weight: 0.5kg

**Features:** Fitted with shock absorber pack.

Max Fall Arrest Force 6KN

RGL3

The RGL3 is supplied in two standard lengths: 1.3 M

1.8 M

The RGL3 is a twin leg lanyard. With the same specifications as the RGL 1 (see data sheet), the extra leg allows movement between anchorage points by means of double clipping. This system is generally used for tower climbing, steel erecting, scaffolding and maintenance on open structures. When used in conjunction with two Girder Slings (RGK26), the RGL3 can be used as a means of progression through suitable structures where no fixed lifeline or eyebolts are available. We Use 40KN webbing in the manufacture of this product which provides greater strength, wear and shear resistance compared to other webbing.

It is also treated with a water repellent coating which should extend the life of this product

This lanyard can be fitted with any compatible EN362 Karabiner

(For details of daily inspection procedures, see the info sheet)
